

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class Json_Exception["Json::Exception"]
    Json_Exception --|> std_exception
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'std::exception' with three empty compartments. Below it is a class box for 'Json::Exception' with three compartments: the first for the class name, the second for a private member '# msg_', and the third for public methods '+ Exception()', '+ ~Exception()', and '+ what()'. A blue arrow with an open triangle head points from the 'Json::Exception' box up to the 'std::exception' box, indicating that 'Json::Exception' inherits from 'std::exception'.

Json::Exception

msg_

+ Exception()
+ ~Exception()
+ what()
